Technical specifications and features

Rolling-code format:

Unlike a fixed code format remote control system that transmits the exact same code every time you operate your remote controlled device, the Keeloq[®] Rolling-code format transmits a random code with every operation. This unique coding format is factory programmed making it impossible to duplicate a remote transmitter. The only way to add a new transmitter to your security system is to program it into your receiver memory. To date there is no system more secure. Coupled with ET Systems proven design reliability and our 1 channel, 3 channel and the all new 999 user RXCONDO-RC receivers, you now have the best options available to you.

The ET Blue Plus range of transmitters are fully compatible with the ET-500 Plus sliding gate motors, the 90 Blue Plus swing gate motors, the DC Blue Plus garage door operators and the Access Blue vehicle barriers.

Special Features:

- Easily identifiable with consistent colour-matching across-the-range
- Durable and robust
- Incorporates the world-renowned Keeloq[®] Rolling-code, in the unique ET Systems design format, for long lasting security

Technical Specifications:

ROLLING-CODE FORMAT TRANSMITTERS	TYPE	BUTTONS	BATTERY LOW INDICATION	10 - 100m RANGE LINE OF SIGHT	FREQUENCY
TX1-RC	KEY-RING	1	YES	YES	433.92 Mhz
