

LCD TFT01 Arduino Mega Shield v2.0

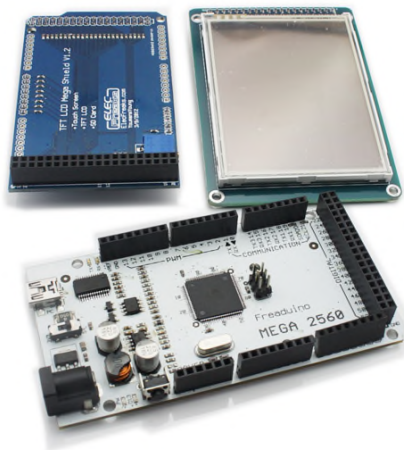

Read more: <http://www.elec Freaks.com/store/lcd-tft01-arduino-mega-shield-v20-p-214.html#ixzz331VTvqsg>

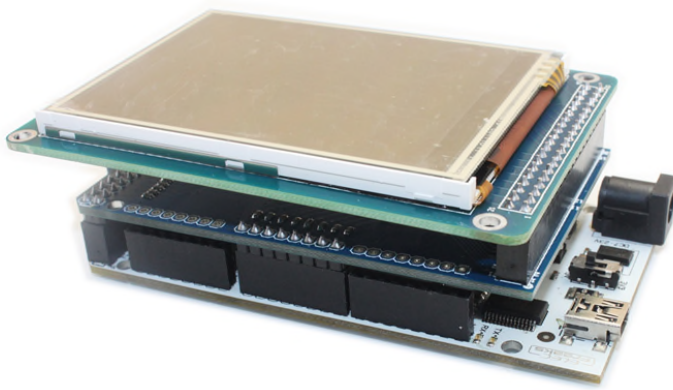

Description

This board have update to Rev2.0 and white color, its more stable and the same use it

The TFT01 LCD module is work in 3.3V voltage level and it's not compatible with Arduino MEGA pins , so we make a shield for Arduino MEGA. Now user can directly plug the TFT01 in the shield and stand on the Arduino MEGA board.

The TFT01 MEGA shield V1.0 supports both 16 bit mode. Because of Mega board have enough pins for using SD card and Touch function at the same time.
