

Most advanced sheath integral casting technology, combined with banana plugs fully, the thick special heat-resistant nylon material

Concave design of sheath tail can protect welding points against moisture

Clearly positive and negative punctuations

Large current banana plugs with greater contact area, thicker foreman shrapnel, though only 3.5mm, but it can stand constant 80A, peak 120A current

Special design of sheath, Groove Groove design, solve the inverse problem of annoying plug, Plug connections more closely. Asymmetrical design looks more beautiful

Anti-sliding-plug design, easier to plug

Humanization design of the tail wire, 180 degrees outward arranged, so that welding work easier

Precision mould processing, connecting precision without leaving any gaps, good sealing performance
