

FlukeView Forms Software with cable

With FlukeView® Forms documenting software, the logging capabilities of handheld test equipment can be used to solve tough problems. You can download the readings from meters into FlukeView® Forms to spot trends and document measurement data.

Typical Logging Application

You can instantly review and compare data from up to 6 different meters† on the same document - providing analysis capabilities that a meter alone can't provide.

FlukeView® Forms comes with an array of standard analysis and reporting forms that get you started on displaying your data in tables, graphs or helpful diagrams. You can leave notes on the forms to draw attention to a particular event.†

Or use the FlukeView® Forms Plus Designer† to customize your reports or add your company logo.

FlukeView® Forms communicates with supported tools fast and easily via an infrared serial interface. The software will automatically recognize your meter and transfer the data without any configuration.

Share or store your data with co-workers or clients – print forms, export to other software programs, or have co-workers and clients download the free FlukeView® Demo/Reader to view and interact with your captured data.
